

PrismFlow

Intelligent Multi-Angle Data Preprocessing Framework — Technical Overview

Introduction

Exploratory Data Analysis (EDA) — examining data structure before modeling

Data Pipeline — automated flow from raw data to model-ready output

Uniqueness

Modular Architecture — independent, swappable analysis modules

Holistic Scoring — combined readiness score across all modules

Challenges and Problems

Data Heterogeneity — mixed types/formats across sources

Missing Values & Outliers — incomplete or extreme data points

Class Imbalance — uneven target category distribution

Solution and Achievements

Automated Data Cleaning — rule/ML-based error correction

Feature Selection — identifying the most predictive variables

Data Readiness Score — quantified ML-preparedness metric

Markets and Scalability

Horizontal Scalability — scales via added compute nodes

MLOps Integration — plugs into existing ML pipelines

Requirements and User-Friendly (Ease of Assessment)

Low-Code/No-Code Interface — configurable without programming

Interactive Dashboard — visual, at-a-glance quality reports

Prior Solutions or Projects

DREAMER — ML-based dataset readiness evaluator

DataLens — interactive tabular data-quality dashboard

Data Readiness Report — multi-dimension quality documentation
